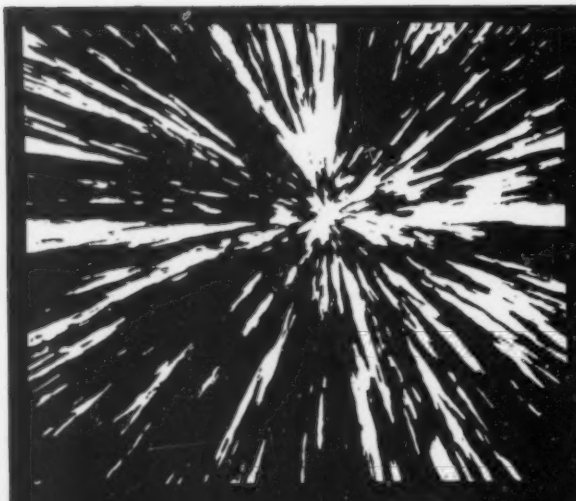
# Subject Index

Algae, nitrogen-fixing blue–green, production of nitrogen fertilizer with, 83
Alkaline phosphatase, serum, measurement of, 9
Amidase, bacterial, clorobiocin cleavage by: the small scale preparation of clorobiocinamine, 193
D-Amino acids, enzymatic conversion of *N*-carbamoyl-D-amino acids to, 201
Amino acids, threonine and other, reactions of partially purified tyrosine phenol lyase with, 269
Applications, biotechnical, cellulose bead entrapped microbial cells for, 26
Aspartase, properties of fibre-entrapped, 189
*Aspergillus niger*, effect of DDVP (insecticide) on citric acid fermentation in, 127
Atmospheric corrosion problems in secondary fibre plants, 205
Automatic cellulase assay in computer-coupled pilot fermentation, 117
Automatic monitoring of protease activity during fermentation, 51
*Bacillus subtilis*, cell composition studies in batch microbial reactors: biphasic growth of, 287
Bacteria, thermophilic: ecology, physiology and technology, 243
Bacterial amidase, clorobiocin cleavage by: the small scale preparation of clorobiocinamine, 193
Barley starch, soluble and immobilized enzyme technology in bioconversion of, 273
Batch microbial reactors, cell composition studies in, biphasic growth of *Bacillus subtilis*, 287
Biotechnical applications, cellulose bead entrapped microbial cells for, 26
Blue–green algae, nitrogen-fixing, production of nitrogen fertilizer with, 83
Calcium alginate gel pellets containing entrapped microbial cells, physical studies on the mechanical stability of columns of, 183
*Candida utilis*, growth characteristics of, in a multistage culture system, 100
*N*-Carbamoyl-D-amino acids, enzymatic conversion of, to D-amino acids, 201
Carrageenan and locust bean gum, immobilization of *Escherichia coli* cells having aspartase activity with, 95
Carriers, enzyme stabilization without, 74
Catalytic activity of poly(acryloyl morpholine)-immobilized horseradish peroxidase in organic/aqueous solvent mixtures, 37
Cell composition studies in batch microbial reactors: biphasic growth of *Bacillus subtilis*, 287
Cells, cellulose bead entrapped microbial, for biotechnical applications, 26
Cells, studies on fibre-entrapped whole microbial, in urea hydrolysis, 47
Cellulase assay, automatic, in computer-coupled pilot fermentation, 117
Cellulose bead entrapped microbial cells for biotechnical applications, 26
Citric acid fermentation in *Aspergillus niger*, effect of DDVP (insecticide) on, 127
Chemicals from fermentation, industrial, 173
Clorobiocin cleavage by bacterial amidase: the small scale preparation of clorobiocinamine, 193
Clorobiocinamine, clorobiocin cleavage by bacterial amidase: the small scale preparation of, 193
Computer-coupled pilot fermentation, automatic cellulase assay in, 117
Corrosion problems in secondary fibre plants, atmospheric, 205
Dates as a potential substrate for single cell protein production, 180
Dehydrogenase, evaluation of, as a suitable indicator of soil microflora activity, 279
Design and response characteristics of an enzyme electrode for measurement of pencillin in fermentation broth, 260
5-Diazosalicylic acid bonded to a titanium(IV) oxide film, an investigation of the properties of glucoamylase immobilized on glass beads involving, 197
DDVP (insecticide), effect of, on citric acid fermentation in *Aspergillus niger*, 127
Effectiveness factors, operational, of immobilized enzyme systems, 41
Electrode, enzyme, design and response characteristics of, for measurement of pencillin in fermentation broth, 260
Enzymatic conversion of *N*-carbamoyl-D-amino acids to D-amino acids, 201
Enzymatic epoxidation reactions, 15
Enzymatic protein hydrolysis in a membrane reactor related to taste properties, 122
Enzyme electrode for measurement of penicillin in fermentation broth, design and response characteristics of, 260
Enzyme, soluble and immobilized, technology in bioconversion of barley starch, 273
Enzyme stabilization without carriers, 74
Enzyme systems, immobilized, operational effectiveness factors of, 41
Enzymes, glucose analyses utilizing immobilized, 91
Enzymes, hepatic microsomal, potential applications, 3
Enzymes in non-aqueous solvents, 253
Enzymes, use of, in the production of vegetable food flavouring extracts, 282
Epoxidation reactions, enzymatic, 15
*Escherichia coli* cells having aspartase activity, immobilization of, with carrageenan and locust bean gum, 95
Fermentation, automatic monitoring of protease activity during, 51
Fermentation broth, design and response characteristics of an enzyme electrode for mesurement of penicillin in, 260
Fermentation, computer-coupled pilot, automatic cellulase assay in, 117
Fermentation, industrial chemicals from, 173
Fertilizer, nitrogen, production of, with nitrogen-fixing blue–green algae, 83
Fibre-entrapped aspartase, properties of, 189
Fibre plants, secondary, atmospheric corrosion problems in, 205
Flavouring extracts, vegetable food, use of enzymes in the production of, 282
Food flavouring extracts, vegetable, use of enzymes in the production of, 282
Glucoamylase, immobilized, hydrolysis of soluble starch by rotary disc of, 125
Glucoamylase immobilized on glass beads involving 5-diazosalicyclic acid bonded to a titanium(IV) oxide film, investigation of the properties of, 197
Glucose analyses utilizing immobilized enzymes, 91
Glucose isomerase, a simple method for the rapid and economical immobilization of, 113
Glycidyl methacrylate carriers, synthetic model polymers in the study of protein immobilization on, 107
Growth characteristics of *Candida utilis* in a multistage culture system, 100
Hepatic microsomal enzymes: potential applications, 3
Horseradish peroxidase in organic/aqueous solvent mixtures, catalytic activity of poly(acryloyl morpholine)-immobilized, 37
Hydrogenase: properties and applications, 165
Hydrolysis of soluble starch by rotary disc of immobilized glucoamylase, 125
Hydrolysis, urea, studies on fibre-entrapped whole microbial cells in, 47
Immobilization of *Escherichia coli* cells having aspartase activity with carrageenan and locust bean gum, 95
Immobilization of glucose isomerase, a simple method for the rapid and economical, 113
Immobilization, protein, on glycidyl methacrylate carriers, synthetic model polymers in the study of, 107
Immobilized enzyme, soluble and, technology in bioconversion of barley starch, 273
Immobilized enzyme systems, operational effectiveness factors of, 41
Immobilized enzymes, glucose analyses utilizing, 91
Immobilized glucoamylase, hydrolysis of soluble starch by rotary disc of, 125
Immobilized glucoamylase, investigation of the properties of, on glass beads involving 5-diazosalicylic acid bonded to a titanium(IV) oxide film, 197
Immobilized horseradish peroxidase, catalytic activity of poly(acryloyl morpholine)-, in organic/aqueous solvent mixtures, 37
Industrial chemicals from fermentation, 173
Insecticide, effect of DDVP, on citric acid fermentation in *Aspergillus niger*, 127
Locust bean gum, carrageenan and, immobilization of *Escherichia coli* cells having aspartase activity with, 95
Measurement of serum alkaline phosphatase, 9
Membrane reactor, enzymatic protein hydrolysis in, related to taste properties, 122
Methanol-utilizing yeast, growth of, 265
Microbes, patents and, United States, 23
Microbial cells, cellulose bead entrapped, for biotechnical applications, 26
Microbial cells, studies on fibre-entrapped whole, in urea hydrolysis, 47
Microbial degradation of recalcitrant compounds and synthetic aromatic polymers, 226
Microflora activity, soil, evaluation of dehydrogenase as a suitable indicator of, 279

Microsomal enzymes, hepatic, potential applications, 3
Multistage culture system, growth characteristics of *Candida utilis* in, 100
Nitrogen fertilizer, production of, with nitrogen-fixing blue–green algae, 83
Nitrogen-fixing blue–green algae, production of nitrogen fertilizer with, 83
Operational effectiveness factors of immobilized enzyme systems, 41
Papain conjugates, water-insoluble, of titanium(IV)-activated supports, 31
Patents and microbes, United States, 23
Penicillin in fermentation broth, design and response characteristics of an enzyme electrode for measurement of, 260
Phosphatase, measurement of serum alkaline, 9
Physical studies on the mechanical stability of columns of calcium alginate gel pellets containing entrapped microbial cells, 183
Plant proteases, sulphydryl, 233
Polymers, synthetic aromatic, microbial degradation of recalcitrant compounds and, 226
Polymers, synthetic model, in the study of protein immobilization on glycidyl methacrylate carriers, 107
Poly(acryloyl morpholine)-immobilized horseradish peroxidase in organic/aqueous solvent mixtures, catalytic activity of, 37
Production of nitrogen fertilizer with nitrogen-fixing blue–green algae, 83
Protease activity during fermentation, automatic monitoring of, 51
Proteases, sulphydryl plant, 233
Protein hydrolysis in a membrane reactor related to taste properties, enzymatic, 122
Protein immobilization on glycidyl methacrylate carriers, synthetic model polymers in the study of, 107
Protein, single cell, production, dates as a potential substrate for, 180
Reactors, batch microbial, biphasic growth of *Bacillus subtilis*, cell composition studies in, 287
Recalcitrant compounds and synthetic aromatic polymers, microbial degradation of, 226
Restriction endonucleases and their applications, 154
Rotary disc of immobilized glucoamylase, hydrolysis of soluble starch by, 125
Serum alkaline phosphatase, measurement of, 9
Single cell protein production, dates as a potential substrate for, 180
Soil microflora activity, evaluation of dehydrogenase as a suitable indicator of, 279
Soluble and immobilized enzyme technology in bioconversion of barley starch, 273
Solvent mixtures, organic/aqueous, catalytic activity of poly(acryloyl morpholine)-immobilized horseradish peroxidase in, 37
Solvents, non-aqueous, enzymes in, 253
Stabilization, enzyme, without carriers, 74
Starch, barley, soluble and immobilized enzyme technology in bioconversion of, 273
Starch, soluble, hydrolysis of, by rotary disc of immobilized glucoamylase, 125
Sulphydryl plant proteases, 233
Supports, titanium(IV)-activated, water-insoluble papain conjugates of, 31
Synthetic aromatic polymers, recalcitrant compounds and, microbial degradation of, 226
Synthetic model polymers in the study of protein immobilization on glycidyl methacrylate carriers, 107
Taste properties, enzymatic protein hydrolysis in a membrane reactor related to, 122
Thermophilic bacteria: ecology, physiology and technology, 243
Threonine and other amino acids, reactions of partially purified tyrosine phenol lyase with,
Titanium(IV)-activated supports, water-insoluble papain conjugates of, 31
Titanium(IV) oxide film, an investigation of the properties of glucoamylase immobilized on glass beads involving 5-diazosalicyclic acid bonded to a, 197
Tyrosine phenol lyase, reactions of partially purified, with threonine and other amino acids, 269
United States patents and microbes, 23
Urea hydrolysis, studies on fibre-entrapped whole microbial cells in, 47
Vegetable food flavouring extracts, use of enzymes in the production of, 282
Water-insoluble papain conjugates of titanium(IV)-activated supports, 31
Yeast, methanol-utilizing, growth of, 265



the international journal for the science and technology of polymers featuring

**Polymer Communications**
from September 1979

**Polymer** is the international journal for the science and technology of polymers. It publishes original research papers on all aspects of the physics, chemistry, technology, engineering and applications of synthetic polymers.

From September 1979 **Polymer Communications** replaces the current Letters section in **Polymer** and publishes urgent preliminary papers supported by essential experimental evidence only. Normally a full paper will follow at a later date.

To find out further information about **Polymer** featuring **Polymer Communications**, please write to: **Mrs Sheila King,** IPC Science and Technology Press Limited, P.O. Box 63, Westbury House, Bury Street, Guildford, Surrey GU2 5BH, England

polymer
